## FOR IMMEDIATE RELEASE

### **Ares Armor Announces the Online Availability of Pistol Buffer Tube QD**

*Positive industry impact of a quick detach (QD) attachment point on end plate.*

**Oceanside, CA – Build Your Own Firearm** – Ares Armor announces the online availability of NEW Pistol Buffer Tube with QD attachment point, supplying purpose built products for everyday consumers and tactical enthusiast's use.

---

#### **NEW Pistol Buffer Tube - Anodized** **Made in the U.S.A.**

---

##### **Manufacturing Process:**

The Ares Armor pistol buffer tube begins its life as a piece of 1.375 Diameter billet 6061 aluminum. It is then transformed into a piece of patriotic wonder by being turned down to a 1.355 diameter pistol buffer tube with three lines machined into the exterior to signify the III%. The tube is rounded at the end and sent off to be anodized with a mil-spec hardened anodized finish. In the end we have produced a 100% American made product which is superior to all that is available.

---

##### **End Plate Features a QD attachment point:**

The Ares Armor pistol end plate begins its life as 6061 Billet Aluminum Stock. It is then machined into the marvel you see before you. An anti-rotate quick detach (QD) attachment point is machined into the plate so you can attach a QD sling swivel to the rear of your pistol. Once machining is complete it is sent off to anodizing for a mil-spec hardened anodized coating.

---

##### **Product Purchase Includes:**

- Buffer
- Spring
- Ring
- Features: Quick Detach (QD) Attachment Point

---
